

# Powering OFF PSA Lithium Alarm Model: LIF10YPEW

**REMOVING THESE ALARMS FROM THEIR BASE PLATE AND POWERING THEM OFF SHOULD ONLY BE DONE IF ALL ATTEMPTS TO HUSH THE ALARMS HAVE FAILED.**

If you do this you must advise your property manager of this so a technician can be sent to resolve the issues with the alarms.

Follow the steps below to remove and power off this alarm type.

## ALARM ON SWITCH POSITIONS

## FOLLOW THESE STEPS

1. Twist alarm anticlockwise to remove from base.
2. You need a small pointed device (eg. skewer, mini screw driver).
3. On the back of the alarm there are two power switches, make sure both of them are in "OFF" position.
4. The left hand side switch needs to be in the down position for the alarm to be turned off.
5. The right hand side switch needs to be in the up position for the alarm to be turned off.

## ALARM OFF SWITCH POSITIONS

6. If either of these switches are in the "ON" position you will need to use a small pointed device to switch them BOTH off.
7. After switching your alarms off contact your property manager to advise them you have done this.
8. A technician will then be sent to conduct further testing.
